CANADA - METEOROLOGICAL BRANCH - DEPARTMENT OF TRANSPORT

MONTHLY WEATHER MAP

NOVEMBER 1959

General Summary of Weather Conditions

November 1959 was a cold month in most of Canada, although temperatures were a little higher than seasonal in the Atlantic Provinces and in the Yukon. In northern Ontario, the southern Prairies, and the interior of British Columbia, temperatures averaged from six to eight degrees below the usual November values.

Precipitation was rather spotty. It was particularly heavy in southern parts of the Maritimes, and between the Bow River in Alberta and Lake Okanagan in British Columbia. Snowfalls were heavy in central Ontario and much of Quebec.

November was a stormy month in Newfoundland, with gale warnings, on an average, every three days. Temperatures averaged about two degrees above the November normal. Rainfall was particularly heavy on the Avalon Peninsula, with falls about twice those usual in November. There was little snow in the Avalon Peninsula, although snowfalls were above normal elsewhere. Temperatures were warm late in the month and at the end of November little or no snow remained on the ground anywhere on the Island.

Temperatures in Labrador averaged about a degree above normal for November. Goose Bay reported precipitation about forty per cent above normal, about half of which was snow. Warm spells melted most of the snow, and at the end of the month, only two inches remained on the ground.

Although November temperatures were fairly mild in the Maritime Provinces it was a dismal month, wet and windy, with little sunshine. Temperatures were warm early in the month, with a few readings into the seventies on the 6th, cool in the third week, and warm again toward the end of the month.

A number of storms moved through or near the Maritimes in November. Precipitation was copious and frequent throughout the area, exceeding twice the usual amount in most areas of Nova Scotia and southern New Brunswick. Snowfall was generally above normal, except on Prince Edward Island, but the excess was mainly in the form of rain. At Halifax, it was the rainiest November since 1936, and the second rainiest since records began in 1870. In northern and western New Brunswick, snowfall amounts ranged up to eighteen inches - about twice the normal fall. A mild spell near the end of the month melted much of the snow cover, but in much of New Brunswick one to three inches remained on the ground at the end of the month.

November was a cold month in Quebec, with above normal snowfall. Temperatures were only a little lower than seasonal in the St. Lawrence Valley, but averaged about four degrees below normal in eastern and northern parts of the Province. The early part of the month was rather mild, with a particularly warm day on the 6th, but the latter part of the month was cool.

Rainfall in Quebec Province was about average for November, but snowfall was about twice normal in most areas. Quebec City had an exceptionally wet month with both rain and snow reaching twice the usual November falls. Most of this precipitation fell on Quebec Province in the latter part of the month. Quebec Airport reported rain or snow or both on every day from the 16th to the 30th. On the 27th and 28th, a storm moving northeastward through New England brought eight to twelve inches of snow to southern Quebec.

In Ontario, November 1959 was cool in the south, and quite exceptionally cold in the north. Lakehead reported the coldest November since 1880. The weather was mild at the beginning of the month, particularly in southern Ontario, where Hamilton recorded 70° on the 5th, but temperatures dropped as a succession of cold fronts moved through the province. On the 22nd-24th, a storm moving northeastward through the Great Lakes brought a spell of mild wet weather to southern and central Ontario, but this was succeeded by another surge of Arctic air, and the end of the month was cold.

November rainfall was about normal or a little above in southern Ontario, but well below in northern Ontario. Snowfall was a little above normal in the south, but most places in northern and central Ontario had twice the average November amounts. Ottawa too had more than twice the usual November snowfall. Much of the snow remained on the ground. At the end of November, most of southern Ontario had a snow cover of an inch or two, although Ottawa Airport reported a snow cover of eleven inches. In northern Ontario, snow cover at the month's end ranged from seven or eight inches at most stations to twenty-one inches at Timmins and twenty-two at Armstrong.

Temperatures were about four degrees below the November normal in Manitoba, southern Saskatchewan, and southern Alberta. The month began with a brief period of mild temperatures, particularly in southern Alberta. By the 10th, very cold air had moved over the region from the north, and the next week was extremely cold. Temperatures failed to reach the zero mark in Alberta on the 15th and in Saskatchewan and Manitoba on the 16th. Temperatures moderated somewhat in milder Pacific air by the 20th and remained seasonal in Saskatchewan and Alberta for the rest of the month. In Manitoba, a second cold spell of somewhat less severity occurred from the 24th to the 28th.

Precipitation in the Prairie Provinces was almost all in the form of snow, with negligible amounts of rain. Amounts in most of the area ranged within fifty per cent, plus or minus, of normal, with surpluses in the south balanced by deficiencies further north. In Alberta southwest of the Bow River, there were excesses; Calgary had 14.4 inches of snow, almost exactly twice the long-term average for November. November was also a particularly windy month in Alberta.

Virtually all areas of the Prairie Provinces had snow cover by the end of November. Depths varied: in Alberta, from a trace in the south to four inches in the north; in Saskatchewan, from two to seven inches; in Manitoba from twelve inches at Brandon and nineteen inches at Churchill to three inches at Winnipeg and an inch at Gretna.

November was a cold and stormy month in British Columbia. Temperatures were near normal along the coast, but from four to eight degrees below normal throughout most of the interior. The middle of the month was particularly cold, as the Arctic air that covered the Prairies spread westward to cover British Columbia; the 15th and 16th in particular were very cold for November at both Victoria and Vancouver.

Precipitation in November was a little below normal along the coast and in the northern part of Vancouver Island, but well above normal in the interior. With the retreat of the Arctic air there was some quite heavy rain along the coast; at Tofino 4.07 inches of rain fell in the six hours ending at 4 A.M., PST November 22nd. In southern Vancouver Island and the Lower Fraser Valley, precipitation averaged about a third to a half above average for November. Vancouver Airport reported over three inches of snow, in addition to nearly six inches of rain. Inland, precipitation was much heavier than usual for November, and with a higher percentage of snow - Prince George reported twenty-three inches of snow, Kimberley thirty-one, and Penticton nine.

November 1959 was sunnier and more windy than most Novembers in British Columbia. Sunshine amounts were substantially above normal - Vancouver reported the sunniest November in fourteen years of records, and Prince George the sunniest in thirty years of records. Gales were recorded on nine days along the south coast and on nineteen days on the north coast. On the 16th, southeast winds of over sixty knots were reported on the Queen Charlotte Islands.

Temperatures in the Yukon in November were above normal in the south, but below normal further north. Precipitation was almost entirely snow. Whitehorse reported nine inches, a little below normal. Dawson, however, reported seventeen inches and Mayo Landing eighteen inches - 64 and 113 per cent, respectively, above the long-term average.

November temperatures in the Northwest Territories were below normal in Mackenzie, about normal in Keewatin and southeast Franklin, and above normal in the Arctic Islands. The coldest place in Canada was Eureka, with a mean temperature of 23° below zero, slightly above normal. Alert, with a mean temperature of six degrees below zero, was nine degrees above normal. Snowfall was generally below normal on the mainland, except for Yellowknife and Port Radium, where amounts were roughly twice the November average. On the Arctic Islands, snowfall averaged about twice normal. Amounts were nevertheless small in the Northwest Territories, compared with other parts of Canada, ranging in most areas from one to seven inches of snow, equivalent to only as many tenths of an inch of rain. Eureka was the driest place in Canada, with only six tenths of an inch of snow.

NOVEMBER 1959
TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month including the rainfall and the equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).
The use of A following the station name indicates that the meteorological observations are taken at Airport offices.
